Robinson

Rm. 315

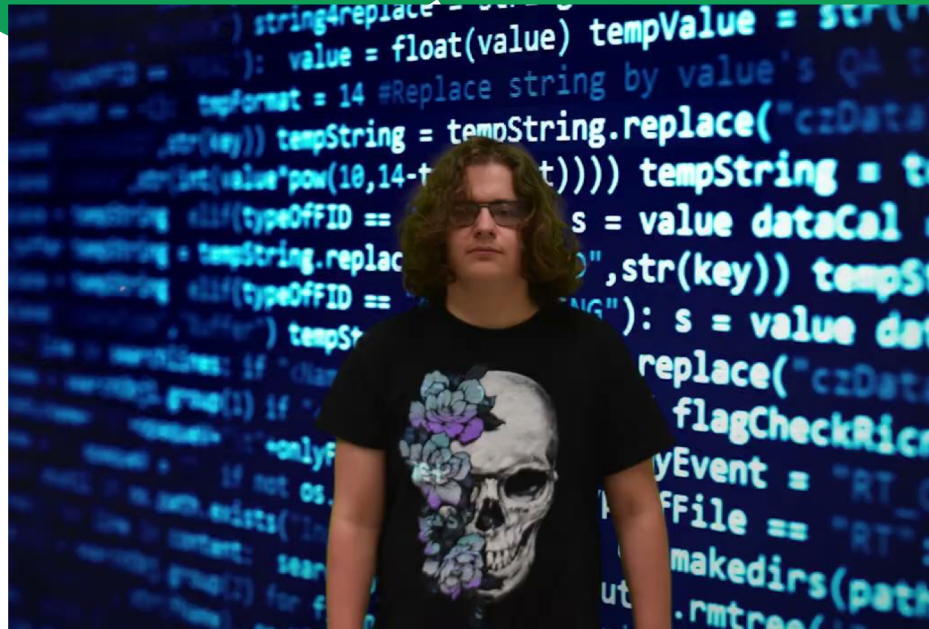

Visual Storytelling

In AVTECH, students will get a hands-on learning experience. They will be instructed on technical aspects of film. They will learn how camera angles, lighting and camera movement play a role in telling a visual story.

Visual Effects

Students will also learn the basics of utilizing the green screen. Inserting a variety of backgrounds, students will have firsthand knowledge of how to manipulate their environment to fit the respective scene.

Lighting

Students will learn how light affects the subject. Different lighting positions cast shadows and shape profiles of various subjects.

Podcasts

Students will engage in creating audio content with podcasts. In 15-20 minute segments, podcast episodes will be recorded on a variety of content material chosen by the students. The podcasts will include: intro music, segments, transitions and authentic logos.

The Game Station

Keene Content

Students will provide media coverage and a variety of promotional content for Keene athletics as well as other events. This can range from: broadcasting games, filming middle and elementary school events and more! All content will be uploaded to Keene's YouTube page.
